

Solar for Business

We provide a client-centric approach to developing a bespoke solar panel (PV) system using only the highest quality products and services. All solar PV products required in the process are carefully sourced. ESS also offers comprehensive services including energy management and maintenance to ensure your commercial solar project stays on track.

WHY SOLAR

You wouldn't think twice about switching to a cheaper more reliable electricity supplier, and solar power is exactly that.

With an efficient solar power system in place you can save on power bills by up to 75% straight away and keep saving year-on-year. These savings reduce your operating costs immediately. Because the costs are fixed unlike volatile energy prices this makes it easier to budget more effectively.

Once you have the system in place, you now have a built in power saving infrastructure. This instantly increases the capital asset value of your business to your advantage.

Solar power systems also provide a clear competitive advantage. You not only cut immediate costs and remove uncertainty from future expenses, you also are now a very clearly visible green company. Reducing your carbon footprint and showing customers you are an environmentally responsible business will make you stand out in your market.

To start saving on your power, increase the value of your business and stand out as a leader in your industry call ESS to arrange a consultation.

Are you looking to reduce costs?

Commercial solar systems provide fast and efficient savings, with increased asset value and improved competitive advantage.

Lower electricity bills

You can cut your power bills by up to 75% straight away, which is a permanent reduction in operating costs.

Return on investment

A fast 3-5 years return on investment is possible with reduced operating costs, Government incentives (such as rebates and feedback tariffs) and taxation depreciation of capital investment.

Budget more effectively

Financial planning is easier because you are producing your own power at a fixed cost, and avoiding volatile power prices.

Competitive Advantage

Cost minimisation, improved budgeting and being a green business help to improve your competitive advantage.

Increase Asset Value

Capital asset value of your business & premises are increased through built-in power saving infrastructure and enhanced efficiencies.

Being a green business

Reduce your carbon footprint and provide a sustainable & environmentally responsible business with a clean energy future.
